Dell M209X Manual

The internal DLP technology touts higher contrast, less visible pixels and more portability. Weighing in at 1.2 kg, this portable projector is bright and compact, perfect for business travelers, taking on a family vacation or just moving from room to room. The display automatically shuts down. Turn the display on again after the projector cools down. In the Main Menu, press or to navigate through the tabs. Use or on the control panel or the remote control to make adjustments to a setting. A UTOKEYSTONE — Auto adjusts the image distortion by tilting the projector. The screen appears cooler at higher color temperatures and warmer at lower color temperatures. To turn on the projector press the Power button. MUTE — Allows you to mute the sound. AUDIO SOURCE — Select either HDMI or Analog Audio In as the audio source for use. A Please Key In the Password screen appears requesting you to enter a password when the projector is powered on the next time. Select Off to disable password protection. A standard for measuring the brightness. When used in a normal forward projection environment text, graphics, etc, are backwards. Reverse image is used for rear projection. Pressing the Menu button on the Dell remote control, or the projector's control panel, brings up the main menu, which runs across the bottom of the screen shown below. This menu allows manual or automatic adjustment of keystone correction. It also offers manual control of the aspect ratio.<http://www.impproperty.com/images/userfiles/ingenico-entouch-1000-manual.xml>

This menu, of particular note, offers a choice of five video modes, including PC, Movie, sRGB, Game and once again, a Custom mode you can setup yourself. As you would expect, the Lamp menu lets you select the full power lamp mode, or lower power Ecomode. This menu also tracks lamp hours, lets you engage Power Saving which will shut down the projector after a period of time with no active source. There is also a Quick Shutdown mode, for those in a hurry, and, of course, the Lamp Reset, needed when you replace an old lamp. From this menu, you can also password protect the projector. The operative terms are Small, good layout, and styled to match the projector complete with shiny black buttons that match the projector's control panel, a flat black look for the rest of the remote and additional buttons, and the same gray trim. Cute! Here goes It's got the four arrow keys, a center Enter button indicated with a checkmark symbol, a Menu button and a button to toggle between aspect ratios. The buttons feel and work well. Despite the remote's small size, people with large hands should be most pleased, as all the buttons are nice and large. Overall, it feels good in one's hand. Nicely done. Having the buttons all backlit, would have been a nice touch, but, we're seeing less endless backlit remotes as portable projectors get brighter and brighter, and are less used in fully darkened rooms. Bottom line, the zoom lens feature is more about finding the right spot to fill the screen, and having just enough zoom control to fine tune it. That is just fine for most applications. For video, where the rainbow effect is much more likely to be visible, those of us sensitive to the rainbow effect, will see it. Since the Dell is a DLP projector, the pixel structure is definitely less visible than with 3LCD projectors. This does tend to make it seem a touch softer than an LCD projector, but in reality, that doesn't impact

readability. <http://www.conservatoriocuneo.it/public/ingenico-en-crypt-2100-manual.xml>

It's the more visible pixel mask of an LCD projector that pretty much makes it seem sharper, without actually being sharper. A bit noisy, but not really a problem for business presentations. In Ecomode, however it drops to 33 db, which is pretty quiet for a business projector, and about the same as a typical home theater projector when in full power. The first two series are designed for business and classroom applications. These projectors both utilize power. It will be great to see it full of tools and crankin' out new projects. Also I love the idea of the new guild format. After all, the home. Please use the box above to search for any other information. A chequerboard pattern is used to determine the projectors contrast ratio of black to white regions. Ambient light is subtracted from all brightness measurements before calculations and comparisons are made. We also consider the performance of the machine with video output. Fast action and animated film is used to measure refresh times, skin tones, solid and graded colours, and borders. We examine menus and options, setup, as well as connectivity options. In the case of a network projector such as this, we also perform a simple check to ensure a wired network connection can be achieved simply and with acceptable results linking a single projector to a single computer. It's nice looking, but the casing is inclined to fingerprint easily — especially the glossy finished control panel and remote control. This theoretically provides a higher contrast than competing 3LCD technology, but DLP may be accused of having slower refresh rates. Resolution on this device is only modest at 1024x768 pixels. Video can be piped via VGA, HDMI, composite and Svideo, allowing the device to be connected to a nice range of computers, DVD players and other AV devices. It also sports audio in and outjacks and a builtin, oneWatt speaker.

<http://ferramentafranza.com/images/Craft-Robo-Silhouette-Sd-Manual.pdf>

Single Watt speakers are usually useless since fan noise tends to drown them out, and in this case, the M209X is no exception. It also features a USB port, which enables a mouse linked to act as the projectors remote control. Screen distances between one and twelve metres are supported, allowing an image size from as small as 23 inches, up to almost 303 inches. Larger images are, of course, not as bright. One menu contained part of the colour and screen size controls, with separate menus for the rest of the colour controls and screen shape. Remembering what is contained on which menu is a challenge. A 90day warranty applies to the lamp, which is typical of projectors in this category. If a fault develops Dell will attempt to resolve the issue over the phone, but a technician or replacement device can usually be arranged on the next business day if this isn't effective. Sameday service contracts are also available. Of greater concern was image brightness. The left edge of the screen

was much poorer than the right edge, by approximately onethird. Its contrast, however, was excellent. It exceeds all other recently tested machines mainly 3LCD models. Base warranty is two years, with nextday advance exchange service. This is a very cost effective machine to run although economy mode does mean reduced image brightness. Its maximum brightness is 2000 lumens which is pretty good. You may unsubscribe from these newsletters at any time. You may unsubscribe at any time. Alternatively, choose a bare bulb without housing if you already have experience with replacing bare bulbs and are willing to deal with the more challenging replacement process. If you do not want to compromise on projection quality and reliability, choose an original manufacturer lamp. If you prefer a cheaper option and projection quality and reliability are not your top priority, buy a generic lamp. A suitable compromise is the original bulb inside option. It provides the same projection quality as an original manufacturer lamp, yet for a better price. You can choose from 3 lamp options original, hybrid or generic. This option is recommended for its maximum reliability and easy replacement process.

This is a very reliable solution and is cheaper than the original manufacturer option. We recommend it thank to its reliability and affordable price. It is a cheaper solution recommended for inhome use, where projection quality and reliability are not as crucial. Even though generic lamps are not necessarily of the same quality as original manufacturer lamps, their price is nevertheless very attractive. You can choose from two options of this bare lamp original or generic. This solution is cheaper than a lamp with housing, although it requires a certain amount of manual skills. This option is recommended for customers who already have some experience with bare bulb replacement. Keep in mind that replacing the bulb in the housing requires manual skills and tools. It is the cheapest option which we recommend for inhome use, where projection quality and reliability are not as crucial. A Brighter and More Portable Projector Intended as an upgrade to Dells venerable 3400MP ultraportable, the new M209X outshines it by 500 lumens, with a claimed brightness of 2000 ANSI lumens. It has an HDMI input port and is less expensive at introduction. Dell also claims to have fortified the normally deficient

colorhandling capabilities of DLP imaging engines with multicolor processing and their new BrilliantColor technology.

Continuing a Dell tradition, the M209X is bundled with a highquality carrying case and a set of cables equipped with Velcro straps for easy storage. But whereas earlier Dell models included every cable you could ever use, this new model lacks cables for its component video and USB ports. But again, you will need to supply your own USB cable to get those latter buttons to work. This new remote design is very stylish, but that style gets in the way of usability The button labels are amazingly tiny and printed in an almost unreadable blue color on a black background. Fortunately, the laser button is equipped with a pair of bumps to make it easy to find. Dell M209X Performance On our lab tests, the M209X did quite well. Its brightness score of 2125 lumens was refreshingly above its advertised value of 2000. Thanks to its DLP technology, the contrast ratio was equally impressive, at 6401although well below the 18001 claim. Unfortunately, Dells new colorhandling technology wasnt very effective Yellow shades were still dull and mustardlike, similar to other DLP projectors such as the InFocus IN15. One nice feature though we couldnt test it was the lamp life. Dell claims that the lamp will last 3,000 hours in standard lamp mode and a startling 5,000 hours in lowpower mode. The lamps in most other projectors are rated at 2,000 hours in standard mode, or 3,000 hours in low power. We should also mention the sprightly cooldown time. In default mode, it took a leisurely 1 minute and 32 seconds, but when you switch the projector into Quick Shutdown mode, the cooling fan cuts out in just 11 seconds, and is relatively quiet to boot. Verdict Light, bright, and fairly low pricedwhats not to like. Oh, right, the remote control. Those looking for a new projector will have a hard time choosing between the Dell M209X and the Optoma TX7155. Both have a similar price tag and features. But, at just 2.

6 pounds, the Dell is a bit more portable, shows better contrast, and has a shorter cooldown time in Quick Shutdown mode. Its longlife lamp and wellcushioned carrying case will have your walletand your backthanking you. You will receive a verification email shortly. Please refresh the page and try again. I cannot find anything in the settings to rotate the image 180 degrees. Does anyone know, specific to the Dell M209X projector if this can be done. Thank you in advance!Inside you will find an option called image flip. Options are HV, H, V. Check it out. It specifically is used for ceiling mounts. Good Luck! Thanks for asking here! Login to post Go into the menu and select extended then select projection then select front. That should return the image to right side up. Select the Advanced menu.If youre mounted at ceiling height, try turning the projector upside down to see if it places the image in the right place on your screen. If that fixes it, then use the onscreen menus for your projector to flip the image and you should be all set. Now the picture is upside down. How do I fix this In here, you will want Ceiling Front or Ceiling Rear depending on how you are using the projector. Some projectors wont let you into the menus unless there is a computer connected. Im not sure if this is one, but keep it in mind if you have trouble.I wonder if you bought or got a ceiling mount rack with it. First mount the rack on the ceiling and then fasten the projector to it. And before that its picture has to be turned upside down too.

When mounted upside down, they project the top of the image 1 foot below the center of the lens. If you dont want to turn the projector over, youll have to change the angle and probably go to the extreme on the keystone correction. Thanks for asking here! But the door and cartridge is in place.
