And as a starter, we will begin with something obvious first, the overall Look of this Canon camera product. Comes as other frontrunners of Rebel series, this camera has been completed with such an elegant look. It has stylish appearance with its 5.1 x 3.5 x 2.5 inches dimension. For the weight, Rebel K2 might win your heart by its 365 grams of weight without batteries. While for the approximation weight with batteries included is about 415 grams. Moreover, for the batteries, this camera uses two CR2 Lithium batteries which are placed inside the grip of camera. On the surface of the camera, you are going to find the Date and Time Imprint panel too. This panel shows you the recent date and hour. This is the hardware that will help you so much in reminding the time. Moreover, you can also find another LCD Panel of this device. The panel is designed way wider to show more complex items. It tells you in detail about the battery status, frame counter, flash mode, shutter speed, and many more The Specification of Canon EOS Rebel K2 As a product of world's wellknown camera manufacturer, the specification of Canon EOS Rebel K2 must be upper hand. Based on the Canon EOS Rebel K2 manual, this camera is produced as the alternative option for those who are willing to buy Canon Rebel series. Rebel K2 is bundled with 35mm focal plane shutter single lens reflex camera. Almost all the EF lenses are compatible with the body of this camera except EFS lens.

Featuring a highspeedprocessing microcomputer and new algorithms, the camera achieves an AF speed equal to that of the classleading EOS Kiss 5 as well as exceeding predictive AF performance for more stable consecutive shooting of moving objects.

Key performance features inherited from the EOS Kiss 5 include a 7point widearea AF system with five focusing points arranged horizontally within the viewfinder and one each above and below the center point. The system ensures accurate AF performance with unrestricted framing, regardless of the position of the subject within the viewfinder. The EOS Kiss Lite also utilizes an enhanced 35zone evaluative metering sensor linked to each focusing point. Featuring a vastly improved metering algorithm, the sensor analyzes and makes adjustments for lighting conditions around the subject to ensure ideal exposure every time. Continuing to redefine the image of SLR cameras, the new EOS Kiss Lite's cuttingedge design features a metallicgray exterior finish that conveys an understated elegance. The model's ergonomically designed handgrip is overlain with a blackrubber coating for enhanced handheld comfort and operability as well as a rugged appearance. The camera also realizes a compact lightweight body measuring 130 x 88 x 64 mm and weighing just 340 grams, the

lightest in the EOS Kiss series. In addition to compact proportions, the EOS Kiss Lite offers an easy operation layout with a large size 22.4 x 30.0 mm LCD data panel on the back of the camera, and groups all main operating controls together on the righthand side to enable onehanded control of most functions. The digital age has its roots in film cameras like the Canon EOS Rebel K2, a professional SLR released in 2003. The success of Canons entrylevel DSLRsthe Rebel familytranslates back to film with the K2, an SLR that features full manual settings, of course, but with easy modes for beginners trying to get the hang of film. Setting Up the Camera Step 1 Turn the camera upside down and slide the release lever on the battery cover to open it. Insert two CR2 lithium batteries included with the camera or available for purchase from most camera stores. Be sure to follow the indicated positive and negative signs. Canon doesnt recommend mixing new and old batteries. Step 2 Attach a lens. The Rebel K2 was typically sold with a 2880mm Canon EF kit lens, but all Canon EFtype lenses are compatible, as well as thirdparty lenses designed for the Canon EF lens mount though Canon recommends using Canonbrand lenses for best results. Remove the body sensor cover and the rear lens cap. Insert the lens, aligning the dot on the lens with the dot on the camera body, and then twist clockwise to lock it in place. Be sure to set the lens for auto focus if applicable. Turn the cameras mode dial to any setting except off. Press down on the cover release latch on the rear of the camera to open the back panel. Insert the film, tilting it slightly outward at the top so that the spool can catch on the bottom first. Align the films leader with the triangle mark along the bottom edge. Close the back cover. The Rebel K2 will automatically wind and load the film, during which time the frame count will appear as a target icon.

The shutter fires once when the film is loaded, and the camera detects the ISO speed automatically you should use DXcoded film. Taking Photos Step 1 Spin the mode selection dial on top of the camera to the green square icon to turn on full automatic mode. The Rebel K2 will set everything for you aperture, shutter speed and exposure values. Aim the camera at your subject by looking through the viewfinder, and then tap the shutter button half way to autofocus the shot. Press the button the rest of the way down to complete the shot. Step 2 Turn the mode selector dial to one of the basic settings to shoot in automatic modes specific to the light. Unlike a digital camera, which adjusts the ISO automatically in these modes to compensate for light values, the Rebel K2 is limited by the film loaded. ISO 100 and 200 films are too slow for most lowlight photography, so try ISO 800, 1000 or higher for the latter modes. Krane 5.0 out of 5 stars I needed a film camera for my beginning photography class and this one more than satisfied my expectation. Not only was it compatible with all my Canon lenses, but it also comes with a pop up flash and a hot shoe so I can mount my Canon 600 EX RT if needed. The controls are also similar to my 5D MK III, so the learning curve was completely intuitive. Auto loading was an unexpected bonus. One big negative was the odd CR2 battery which you can't find in any convenience store although it does last a long time. Pros auto loading, popup flash, hot shoe, compatible with Canon lenses and accessories. Cons no night light, odd battery, no auto off. Several reviews I read put it second best to the Canon Rebel 2000 which I also own. While the two cameras are quite similar the batteries for the K2 are much cheaper than what I could find for the 2000. I like the fact that Canon EOS full frame lenses also work fine on my digital Canon SLR cameras, although the digital lenses with the white dots do not work on the film cameras. I like film photos for their dynamic range which is better than my digital cameras. I will probably keep shooting both film and digital until they stop making film, as has happened for some film cameras in my collection.

While mine came with the instruction manual, you can get a pdf of the manual on Butkus dot org. I'm on my fifth roll of 35mm right now and this camera hasn't failed me yet. It has a light leak every now and then but that's not so bad. I love how it's automatic and rolls your film for you. It has many features to help newbies like myself as well as a full range of manual options. I would recommend getting a different set of lens though, as the kit lens although producing some rather nice pictures seem to not capture the essence of the subject really well. Overall, it's a great camera. I bought them online. Other than that it held up just fine and pictures turned out rather decent. This camera was my first one that I bought for myself 4 years ago and I've taken about 78 rolls of films throughout the year. I'd still recommend it if you want the familiarity of a DSLR and the nostalgia of a film camera. If you are familiar with any of the modern Canon dSLR cameras you should be able to operate this one within a matter of minutes. You'll also find that the light meter is more like what you are used to and has most of the same features just slightly more obscured since it's a basic LCD and just a handful of buttons. It's also saved my rear on two homework assignments now when my AE1 has had issues. It's quite reliable and I'm finding that I use it more than my digital body. Just make sure to take it to a reputable camera shop for a good cleaning and once over you may have light meter or shutter timing issues you don't know about when you are buying used, older equipment. I highly recommend this camera for any digital shooters with EF glass looking to go BACK to film it's a trooper. I'm using this for my portraits. So that is not so good. Other than that it is easy to use and produces nice photos. Can't beat the price of an Andrew Jackson. The pictures it takes are phenomenal. This would be my second camera that I have purchased for my photography class.

The first one I had did not hold up very well. It lasted me about 3 months. But I've had the Canon EOS Rebel K2 35mm for about 2 years now. It is still holding up very well. I'm still looking forward to taking some more extraordinary photos with my Canon EOS Rebel K2. I would extremely recommend this camera. The new body seems to be working. Will develop film when roll is done. I actually own much better cameras like the Canon 5D Mark IV but still bought this camera to dedicate to a side project. I had the SL1 when it came out and I just think these are fantastic little

cameras. Definitely perfect for a beginner. Used Very Good Please try again. Please try again. Please choose a different delivery location. From its advanced focusing technology to its sophisticated image controls and retractable flash, the K2 makes it easy to shoot the pictures you've always wanted and have the time of your life doing it. 7-point Autofocus The Rebel K2's seven focusing points read a wide area of a scene to give you exquisitely precise focus even when your subject is off-center. The K2 detects whether your subject is moving or still, and instantly adjusts the autofocus to match. Specialized shooting modes like Portrait, Landscape or Sports preset the focusing for the subject at hand. There's even a Continuous Shooting Mode to capture sequential action at a fast, silent 1.5 frames per second (fps). 35-zone metering system Getting the right exposure is what separates an ordinary picture from an extraordinary one. That's why the Rebel K2 is equipped with a 35-zone metering system.

Linked to the 7 AF focusing points, the K2's 35-zone metering system gives you accurate, consistent exposure even in tough shooting conditions like strong backlight. In addition to the K2's standard evaluative metering pattern, the camera also offers central-area partial metering covering 9.5% of the picture area. This feature is available in all Creative Zone shooting modes. Shooting Modes Sometimes you want complete creative control. Other times, you just want to shoot. The Rebel K2 gives you the options to do both, easily. 7 programmed Image Modes Full Auto, Portrait, Landscape, Closeup, Sports, Night Scene and Flash Off, let you handle common shooting situations automatically like a pro. For maximum self-expression, 5 Creative Modes Auto Depth of Field AE, Manual, Aperture Priority, Shutter Speed Priority and Programmed AE let you finesse every detail. Flash Metering Whether you're using the built-in retractable flash or you've attached an optional EX-series Speedlite, Canon's advanced TTL and ETTL technologies take the guesswork out of SLR flash photography. By analyzing lighting conditions and focusing zone information, the Rebel K2 automatically gives you the natural, balanced illumination that makes pictures stand out. Easy Operation The Rebel K2's design is intuitive and in tune with your needs. A supersized LCD lets you see camera settings clearly. The intelligent controls are laid out to put everything within close reach for relaxed, one-handed shooting. The result The camera feels like it's a part of you. EF Lenses With their innovative technology and superior optical quality, Canon EF lenses set the standard the world over. The Rebel K2 is compatible with the entire range of over 50 Canon EF lenses. Not compatible with EF-S lenses to give you every creative option. This kit contains the EF 2880 II f/3.5-5.6 standard zoom lens. Similar to the EF 2880 I, this lens uses a DC motor instead of a USM to drive the autofocus.

Having said that this camera is fast. Super quick focus and film advance. It's a film camera that responds like a DSLR. It's small and compact for an SLR and a great camera for those just getting into film photography. Read full review Read less Verified purchase Yes by goodoljack April 25, 2018 Solid little film SLR The Canon EOS Rebel 2000 was one of the last great film cameras before the digital revolution. It is a really great little camera. It's super lightweight and has a lot of great features. The image quality of the Rebel is top notch, and with the ability to scan negatives and being able to

archive your developed negatives, your images are protected forever. No worrying about when, not if, that hard drive is going to crash; because it is going to crash. Negatives saved in albums are forever. On of the many reasons so many people are coming back to film.. Read full review Read less Verified purchase Yes by charlesosborne2002 September 13, 2017 Just what I wanted I was delighted with this, and surprised at how light it was for a full frame SLR. I wanted something for full frame and could not afford digital.

I have a Canon digital 650D like the Rebel series, so the Canon EF lenses work on both, or my M42 screw mount manual lenses with adapter work on both. Most of the features are alike in operation. For important photos I can shoot APSC in digital and full frame with film..
