canon powershot g9 repair manual

The symptoms of such a problem are no power up, dead as a dodo.. I also found the Canon G9 Service Manual on the web which although I didn't get schematics I did get more details on the pcb's including the location of the onboard fuses etc.. opening Camera 2 I spotted a loose screw centre of photo. This had damaged the DCDC Converter board The loose screw is known to short out the DCDC Converter board pictured below. If lucky it will blow the onboard SMD fuse, alas it had done more than that with this one Rear view. Please do not offer the downloaded file for sell only use it for personal usage. Hoztak a gépet, nem lehet bekapcsolni, pedig szinte új az aksik, és fel is vannak töltve. Bekapcsol egy pillanatra, majd ki. Tettem bele 2 új ceruzaelemet, azonnal alacsony feszültségre panaszkodott. Próbáltam aramfelvetelt mérni, alig 7080mA, de nem kapcsol be egyáltalán. Ekkor kivettem a memoriakartyát, és bekapcsoltam anélkül. Visszaraktam, elemek vissza, megy, nincs alacsony feszültség. Akkumulátorokat visszaraktam, ugyanúgy jó. Gondoltam megírom, hahaha masnak is bejön. Udv Jacint Similar manuals You can write in English language into the forum not only in Hungarian. I have had my G9 for a while now, many times in to get rebuilt, but wo. I have a Canon Powershot G7. When I take shots now the image. You may be able to get it going again but typically its a case of a new lens assembly. Or, more likely, a new camera given the cost of repair. Look for lens error postings and you will see the sorry story. A real ripoff; you could manufacture your own cogs; perhaps. You might not need every tool for every procedure. It succeeds the G7, incorporates a slightly larger 12.1 MP resolution, and adds in the ability to shoot in RAW. However Ive had the G7 for a while and decided Id upgrade, but not wanting to spend hundreds I thought Id take a chance and buy a faulty camera in the hope of a successful repair. The symptoms of such a problem are no power up, dead as a dodo. So, I bid on 3 cameras and won. All 3 have different faults just to vary things in the hope that I could get as many of them up and running as possible. The original boards fuses were intact so I suspect a component failure. It was torn so I suspect somebody else had attempted a repair job and failed. Hopefully this time the soldering iron will see a bit more action and if I can get a few lined up fully repaired and functional Ill sell them on again via Ebay for a wee profit. This had damaged the DCDC Converter board If lucky it will blow the onboard SMD fuse, alas it had done more than that with this one. Jon LIKES 0 I have taken the camera apart a bit today and feel confident in my ability to perhaps get in to it and repair it, but I need a bit of guidance as far as what internal issue could be causing this. That is what Im looking for the repair manual for. I have seen elsewhere references to fuses on the logic board, but they were described in relation to no power at all.

Jon LIKES 0 Once you have a little, you just want more and more. It doesnt stop until your bank account is run dry. LIKES 0 Disassembly is actually fairly simple, but you must be very careful. There are a number of things to watch out for. One area where I made a serious mistake was unplugging a ribbon cable from the board. Getting it out was awkward but I ruined it trying to get it back in. It was later on I found out there is a little catch on the ribbon cable socket that you MUST release to unplug and reinsert the cable. Aside from that, just make sure you note which screws go where, as they are varied in length. Easiest to just write it down on a piece of paper and poke the screw through the paper to remember where it goes. The screws are tiny. Dont drop them on the carpet youll never find them. I posted a thread last Sept when my G9 died and in some of the responses are some links to detailed disassembly instructions. They were very helpful. Ill try to find the time to go find the links and post them here, but if you search my threads last Sept approx 18th or so, you can find them. Now I have recently received a donor camera with the lens stuck out. My intention is to take it apart and rob the parts needed to fix mine. I am planning on setting up a tripod with my G11 on it and taking detailed pics of the task so I can post an article on this board so others may benefit. The donor camera was dropped onto the pavement, jamming the lens out. I am looking forward to doing the repair. Again, with a little understanding of taking things apart, this is not very hard to do. Hope this helps. Set Goals!! If you aim at nothing, you will hit it every time. My issue I suspect is because of something in the gear mechanism, but I can not be sure as I am new to this. I wish you luck on yours. Jon LIKES 0 My issue I suspect is because of something in the gear mechanism, but I can not be sure as I am new to this.

Jon Jon, I didnt mean to imply that yours is a dead circuit issue as mine was, but I was intending to post this for the disassembly information. You are absolutely right about the no power at all comment. Just thought I would clarify myself. I went back in my threads and found the one I mentioned. If you go to this this thread, and scroll down to CarloYs comment, you can see the links

he posted that show the process of opening the camera. I think I may just relegate it to the project heap and buy a refurb s95. Jon LIKES 0 Set Goals!! Equipped with 5x optical zoom, it is ideal for snapping pictures of objects at a distance. An HDMI port is built into the camera, so you can show off your pictures to friends and family on the big screen. Take clear photos with this Canon PowerShot Bridge Camera. I've had quite a few cameras, and here are my priorities. I've been disappointed in the past in the above areas with other models. It's surprising the amount of control that you do have. Otherwise, this camera is

trampling on low end digital mirrorless territory. The pop up flash is surprisingly good most of the time it is all you have to have, although you don't have much control, and fill flash is problematic. Nissin has an I40C flash that is nearly ideal, unless you need a master. It also works well as a slave to my 550ex. The camera is not compatible with Canon's 600ex series radio flash system, just the 550ex series IR controls, so Canon's IR controller works best if you need a master flash on the camera. The Canon Speedlites are either too limiting or way too heavy to shoe mount. The big Speedlites work fine in a frame with a cord, but now you've got all this junk to carry.

I know I'm focussing a lot on Speedlites here, but that's because the camera's interface with them is the biggest weakness in the camera. Or you could step up to one of the compact fullsize or nearly full size sensor camera, but they are a LOT heavier and a bigger investment plus, its back to multiple lenses, as the kit lenses usually stink. This camera is almost Leicalike in some ways. If you are willing to take a few minor tradeoffs some control and technical performance for affordability, portability, and ease of use, its a winner. After all, the camera that gets used the most is the one that is with you. The camera I received would almost pass as new, except for the missing charger and manual. BTW, I hate the cheapo strap that Canon puts on it no quick disconnect, so it gets in the way when you mount the camera. The G16 has a larger image sensor giving much better pictures. Yet can still fit in a jeans pocket. It will take some learning time as the camera has so many options. Has great low level light pics. Skipping the latest new camera models and buying the previous generation is the best way to get a good deal. Not using the wifi feature, seems more hassle than its worth. This camera fills that void perfectly. While the image quality is not on par with my DSLRs, it is far superior to any other pointandshoot camera I have ever seen. It has the ability to shoot RAW, has a fullfunction hot shoe for flash use, and the optical viewfinder is very helpful on bright sunny days when the main LCD viewing screen just can't compete with the bright sun. The video quality is excellent, as well. This camera will never take the place of my DSLRs, but is a great companion to them. Nevertheless, the quality of images are high thanks to a large sensor that is sensitive even in low light conditions. I looked for camera that will be small and easy to carry and with decent quality, beyond what a phone can generate. This camera exceeded my expectations.

It suffices with lots of good features. But I'll be danged if I can get the shoulder strap into the side loops that holds it in place. Please note not all services are available to every destination.
