Following these guidelines will help make this the best resource for heavy equipment on the net. Thanks for joining us and I hope you enjoy your stay!! Last winter, when loading hay on cold days, the boom would get stuck after the parking brake was applied. The machine would move, but the boom controls were still locked.

It would eventually free itself after actuating the controls several times, but it worried me to say the least. Any ideas The machine was originally used in chicken houses and the belly has some dried chicken crap in it. I just read a thread about a locking pin on 1845C machines requiring a clean belly and wonder if this problem could be similar. There could also be electrical issues with the safety solenoids. There could also be electrical issues with the safety solenoids. Click to expand. I now have 2 Case machines with intermittent problems. Banghead I bought this 435 to supplement a Case 1845C that has starting problems. I really liked the 2 speed option and the price on the 435 machine. The 1845C has never left me stranded, but turning the key 1520 times until it decided to start is not cool. It blew the 30 amp fuse between switch and starter last year. I replaced switch and things seemed better. It always starts cold, however, it now seems temperamental when hot. So I have one hotnatured, and one coldnatured machine. I don't run them 50 hours per year stacking hay, but it is KEY to my haying operation. It may be several weeks, but I shall investigate in the coming months before winter. Really busy with haying and job and kids and life. Thanks again. Pushing the parking brake button several times will sometimes free the controls. I can hear a faint click when the controls release. I bought a repair manual, but it is useless to me since there are no pictures and little discussion of safety controls. I guess I might have to bite the bullet and go the shop unless someone can tell me where I might be able to look and what it will look like. Is this a solenoid that would look similar to that on a starter. I guess it has a switch actuated by the operator bar or button on operator controls. I will raise the cab this weekend and see what I can figure out, but I am not very hopeful at this point.

I had a 445 that had problems with the safetys and once and a while you couldn't get it to unlock. A new computer solved that for me. Hope you have some luck and get it working, soon. I had a 445 that had problems with the safetys and once and a while you couldn't get it to unlock. A new computer solved that for me. Hope you have some luck and get it working, soon. Click to expand. Replaced the console and it solved the problem. Although the dealer has to program the hours back in it, if you care about that. Ritchie Bros. sells more new and used industrial equipment and trucks than any other company in the world. Actual equipment may vary with options. Illustrations, instructions, diagrams for step by step remove and install, assembly and disassembly, service, maintenance, inspection, repair, troubleshooting, tuneups.
