When going from one to the other, more often than not doesnt recognize the device. Which means I have to do a soft reset to get it to work. Trying to get Compaq to respond is like pulling teeth, painful and leaves you with a loss. Overall, if I had to do it over again, Id buy the new Casio which is what I plan on doing in a few months anyway.Being a college student, I am always taking 68 pages worth of notes per lecture, 4 classes a day, 3 days a week my hand was dying. I use it instead of a laptop, which for me would be way too much to carry because of all the stuff I already carry for my classes.

Also, a laptop has many more features than I would ever need while in class I have my desktop for more complex tasks. Pocket Word doesnt have all the features of Word, such as keyboard shortcuts, but when you synch up the iPAQ with your computer, it changes pocket word files to Word format, so editting is a breeze. Putting in reminders and addresses is simple when done in Outlook, and I like the functionality I get when using services such as Avantgo, or downloading maps off Mapquest. The sound system on this little machine is great get a good set of headphones, such as the Sony MDRG52 which I use, and you are ready to jam to MP3s. The speakers themselves sound a little canish, but using headphones, its great. Im waiting for my Compact Flash expansion pack and CF card to arrive in order to pile in the MP3s. Despite how much fun Im having with this little machine, I admit there are some things that could have been better, such as the screen 4k colors makes for grainy pictures, and websites look a little strange. Another problem is quality control at Compaq the first unit I bought had to be returned because the backlight would not work, not an uncommon problem with these PDAs if you read the Compaq forums. Another thing it comes with a lot of preinstalled software, such as Microsoft Messenger, Excel, etc.

, which is great however, I dont use them, and have yet to figure out how to uninstall them from my PDA I would really like to take out Media Player and install an MP3 player of my choice. I am beginning to believe I CANT remove them. That really irks me. Bottom Line if youre going to use it as a substitute for a laptop, and your primary needs are basic word processing without printing, keeping contact lists, keeping a todo list, appointments, email, silly web browsing, and MP3 listening, this is the machine for you. At 499.00, its much cheaper than a laptop however, its pretty steep for a PDA, so if youre not in a big hurry, wait a few months for prices to drop as competition picks up. I wouldnt suggest going for the more pricier models if your needs are similiar to what I described above just for the extra colors and other dodads believe me, 4k colors is enough. If your needs are a little more complex, maybe a laptop is the better way to go.I happened to see an ad for a local office products company and noticed another product similar to Compaqs IPAQ. While the price was high, I thought I would check things out. Much to my surprise, things have changed quite a bit. One had no rebate and cost more than the one with the rebate. The color TFT screen produces 4,086 colors, and you can view the screen from many angles and in a variety of lighting situations. The Compaq iPAQ wraps the power of a Microsoft Windows operating system in a new interface designed for ease of use in a portable format.

Even if youve never used a computer or digital organizer, learning to use the Compaq iPAQ is easy. Other highlights of the Compaq iPAQ include a microphone and a speaker as well as an audioin jack. The iPAQ allows you to input data in your own handwriting, by soft keyboard, by voice recorder, or through inking. Both audible and visual alarms alert you when you have a scheduled event. What sets this Pocket PC apart from similar devices on the market is its sleevelike expansionpack system. The expansionpack system allows you add functionality to suit your particular needs. Expansionpack options currently include a CompactFlash pack, the ability to attach a CompactFlash card slot to your iPAQ, an executive leather and PC Card expansion pack, and a waterresistant sports pack. In the future, Compaq plans to release a global positioning system pack, so you can make your iPAQ pocket PC into a GPS unit. The Compaq iPAQ is sporty and small. At 5.11 by 3.28 by 0.62 inches and 6 ounces, it fits in your hand or slides into your pocket with ease. Dont let the size fool you into thinking you dont get many applications with your iPAQ. You receive a great deal of Microsoft software, such as Pocket versions of Word, Excel, Internet Explorer, and Outlook as well as the full desktop version of Outlook 2000. Compaq has also built in utilities so that frequent actionssuch as switching between tasks, adjusting volume, or changing backlightingare only a click away. Compaq

0 out of 5 stars My Palm V has been great and I have been loyal to Palm for a couple of years, but this machine represents a quantum leap in capabilties. It has a great screen, making reading everything easier for me. I love the MP3 player, and having my favorite photos to show off. Reading books actually works for me on this and it didnt on my laptop and emails and word documents are a snap. I print pretty well anyway, so handwriting recognition is about 95% .After all of the raving, I do have to say that this is a complex device that takes some effort to master. I crashed 4 times working out how to transfer MP3s and JPEGs in one day I have never crashed a Palm. That said, it does work extremely well. Just be ready to invest time to learn it. I expect that Compaq will improve this in the coming weeks. Activesync was not included, so be ready to download this from the net if you want to sync with Outlook. Id recommend this product. Its very fun.For example, You press in the corner and hold your finger there, then the screen will just draw random lines and shapes all over.But Was useful to listen to music, pictures, basic web surf and email, Map apps, and money tracking appsI bought it primarily for trying out the programs I hope to write, and were testing via the emulators that Microsoft makes available for VS2005 and VS2008. The battery life is my only complaint.I hope we can figure out what is wrong, why it wont sync, then I will return and give a better.hopefully.review of this ipaqIn regards to any Palm device, there is simply no comparison. Heres why The number of useful applications is far beyond what the Palm offers. I downloaded a 2,000 row excel spreadhsheet into the iPAQ and it handled it quickly and perfectly. The speed is LIGHTNING fast. The response is instantaneous for most actions. The useability of Outlook is much better than the Palm PIM manager.

It is faster, better looking, and the instant and automatic keyboard appearance when name searching is fabulous! The synching feature is better and faster than the one on my Palm. Once you place a file in the synch directory, it will always keep it synched with the one on your desktop. This is most important with documents like excel files that are constantly changing.You can also customize the synching to be automatic or manual, and it reads changes to synched files a few seconds after they occur. The Reader application is great. I just wish there were more titles than old fiction classics to select from. Applications software loading is far easier then on the Palm OS. On the Palm, you have to jack around with finding the right location to put a file so it will synch. On the iPAQ, you load the application from your PC like any other software program and it loads immediately on the iPAQ without any file placement games. The game capability is terrific due to the excellent color screen and some good game applications. Some of the games that come on the unit on the free expansion package are superior pacman and the cubicle game. The Jornada is far heavier by 3 oz. The future expandability of this thing is mindboggling. Modem, wireless RF, and vast additional storage is available now, and other remarkable inventions such as GPS will be available soon I think. Compaq support has been excellent. It also helps when your laptop is a Compaq as well heh heh. I feel that the iPAQ will replace my PC in the near future for a lot of what I do, once additional hardware, modem, etc.
