If you don't really know much about the Vector, a favourite in control for TV lighting, read on. I run Training on request and look forward to bringing some more Vector knowledge to the stage lighting community. Enjoy. This new console, Vector, ran two separate systems "under the hood". The idea behind this was that one system processed the DMX output and front panels of the console, whilst the other system Windows XPe run the GUI. This way if Windows was to fail, the output of the console would remain unchanged and the operator would be able to continue firing cues and commands until it had rebooted. There seven console solutions in the family, Vector Red, Blue, Green, Orange, Ultra Violet, Violet and Node. Red being the largest and most expensive and the Node being the smallest and cheapest. The family of console have been used in a wide range of production applications.I used to be the UK Distributor with a colleague of mine. Nowadays I reside as a Freelance Programmer and Vector Trainer in my own right.

This means, almost any programmer can walk up to the desk and have it working how they like it in a matter of seconds. The first Syntax is Action and the next is the Enter syntax. In my opinion, Action syntax is the best to use, it allows most flexibility and fits the desk functions perfectly, however Enter works just as well. In fact, the Vector has tools to enable programmers to split fixture types up. It has 4 Sets. Channel, Spot, Matrix and Media Server. Spot is effectively Compulites name for "Fixture" it does not mean a hard edge fixture; you can patch anything under Spot. Spot, Matrix and Media Server are "cross compatible" so you could if you wanted put a VL 3500 in the Media Server set if you so wished. Each set also has its own "live view" Programmer. This makes for easy show layouts and navigation during programming. It also helps the Programmer number crunch within the desk because Channel 1 just relates to "1" in that set. You would be correct, but Vector has more powerful features up its sleeve.Pickers are available on all Parameters that have "steps" in them, I.e. Gobo Wheel, Colour Wheel, Shutter etc. For linear parameters such as Dimmer, Pan, Cyan there are no pickers. It allows simplicity and power in one package, which nowadays is rare. Deep down, Effects are applied to parameters with Effect Primitives or Curves that apply mathematical functions such as a Sine wave to values against a set time. In these few simple steps, my dimmer is now stepping between 50% and 100% in a wave type offset. How easy was that!! This shouldn't put you off however, Compulite distributors run training on request, and people like me run tailored courses to teach Vector on every level. Once you know who has them, hiring then becomes easier! I am hoping to write tutorials on the subject here at On Stage Lighting. The Compulite Vector series of consoles are ideal. Quick, Powerful, Reliable, and all any Programmer needs.

<https://jagatex.pl/images/camco-oven-manual.pdf>

The new Ultra Violet is ideal for me with twenty playback faders and two internal touchscreens all in a package that is easily carried and easily fitted into a cramped lighting area.And as a user i can say that there are quite a lot. Could had been wonderful console but it is still missing to much.It has everything most other high end consoles do and a lot more in some cases. If you were a true user, you probably would not have said that. I got Compulite Vector blue and i'm very pleased to that desk. But now i got a serious problem with it and i'm gonna tell it to you. They told me that RT unit was broken and it have to be replaced. That's ok. they can do it and i'm happy. 1 week later service called me that Compulite doesn't have any spare RTs anymore and those are not being manufactured these days. So i was saved by our countrys service that they sacrificed one spare vector with RT unit to fix my console. But now that spare unit came to the end of road also and only way to get my console to run again is to refit it with new components and to my suprise it was going to be as expensive as a new vector blue console and i really don't have that kind off money. So i'm very

disappointed to that i have to buy a new console to do my job. So my advise to all who considers buying a vector is that DON'T BUY CONSOLE WITH RT UNIT. My only wish is that Compulite would come and make some reason to users who have bought their console at early years and solved problems with Vector software and reported bugs in system and refit those consoles with decent cost. Now it's just so unfair that if your old RT console needs new parts to run, you have to buy a new console. Because there is no parts to fix it. Now my console sits in case at corner of my warehouse. I really hope to get it working again. It's a great desk with awesome features that i like.

It combines physical buttons and wheels for fast access with an extremely intuitive and flexible touch screen user interface users will be instantly familiar with from their smart phones and tablets. Fed up with trying to remember the syntax for the more advanced features. With Vibe these problems are history, you can have an unlimited number of playbacks and you can position them anywhere on the screen or have different screen layouts for different parts of the show. Only the main buttons you need all the time are on the panel, other buttons appear on the touch screen when you need them and if you get the syntax wrong, no problem, Vibe will prompt you to enter the information required.
