It is a fully featured 2WAY remote start which comes with 2 remote controls and offers up to 3000 feet of range, all for an incredible price. Contact us with any questions prior to purchase. Bypass Module maybe required and is not included. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Dennis Hiler 5.0 out of 5 stars No remote starts are super easy to install but this one went in without a hitch, works as described and my girl loves it. I also like it for the fact it doesnt have that big LCD remote, those just chew up batteries and dont fit in your pocket. This one has the two way little remote that makes sounds to let you know your vehicle is running. So its definitely a win and would buy again for sure. You will need the blade bypass module as well, I have some installs under my belt but this one was a 12 hour deal. Little extra wiring without blade but not hard at all if you have a little common sense. <http://blentech.ru/pic/8024-manual.xml>

- 1.0.

If your vehicle has never had a remote start youll need a pro to install this. There are no instructions on the box when I received it. I had looked up this start kit on compustar website and for my vehicle it said all I needed was I wiring harness to install. I took it to a local mechanic whos certified in my vehicle, and they couldnt install it. I needed more parts. So I took it to a pro installer and had to get what they called a blade for this to be installed. After spending another Benjamin on that and almost 250 in labor I have my remote start installed. Using it is simple, press the button to lock or unlock, press and hold to start the engine. It has a 15 minute timer to shut off the engine. Not sure if that can be reduced or extended, the timer was the same in my previous vehicle so that works for me. It also locks the doors when it starts the engine which is a bonus my previous vehicle didnt have. And it has the safety feature to kill the engine if the brake is pressed before the key is turned to the on position. Very happy with this purchase. The 2 way remote beeps at you when you lock or unlock the doors and plays a chime when the engine starts to let you know that action has been completed. The lights on the remote will flash every 30 seconds or so to remind you the engine is running. So happy I got this, b the day after it was installed we had a cold spell, single digits temps and a couple days of negative temps in the mornings. I didnt have to go out and freeze to start my Jeep. The 3000 ft range is strong enough to start the Jeep in my detached garage from my recliner. Took them 4 mins to change. I wouldnt recommend anyone that is not familiar with the ignition system and have a trustworthy diagram with wire color. I completed the install in about 3 hours if your comfortable with it. I have a big truck and park in the back or the walmart parking lot and it will start from the very back of the store. <http://shinaval.ru/userfiles/802dsl-commissioning-manual.xml>

Only one of the remotes is 2 way though with both were but I only use 1 anyhow. Going online with compustar proved to be no help at all because unless your a registered installer they will not provide

you with detailed installation instructions. To top it off in setting up the idatalink alca using their website to flash the unit I was never able to get the process completed because of the requirements for a computer to communicate with them. You have to have a PC, Macs will not work. Internet explorer has to be used. Then your computer has to be set up for a particular directx and one other driver in order to communicate with the datalink. I was never able to make this happen. I ended up using an extra key placed in the steering column next to the ignition switch to get around the immobilizer. Of course I didnt install this on my own, but I should have also purchased the BladeAL bypass as well with this, since that was needed for my 2005 4Runner. My installer had a bypass, but not the Blade AL. What I love most about this remote start is the range, Ive tested this from 300 meters away, and this has worked every time. What I like least, Compustar should provide two 2 way remote, and not one 2 way remote, and a backup remote thats only 1 way. All and all, I would buy this again! The install was straight forward if you have the proper wiring diagram, and wire locations for your car but its definitely not something the every day person can install. It requires more skill than installing a car stereo. The range is pretty good, and I would buy this again for another car. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again No more cold car. Sorry, we failed to record your vote. Please try again The twoway function for the remote starting does not work no indication of success or failure starting the car making this essentially a giant overpriced oneway kit. Not at all what I expected.

Edit I took the batteries out and then put them back in the remote and now it seems to be working. Review updated to reflect that it is currently working as intended. Sorry, we failed to record your vote. Please try again Page 1 of 1 Start over Page 1 of 1 In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Registration is free, fast and simple, so please join our community today! TriStateSecond of all, my factory keyless still works, is this suppose to be like that. Also is there anyway to make my factory keyless buzzer work with the compustar remote. When i use the compustar remote is mute.TriStateTriStateTriStateTriStateTriStateIll let you know. I have been using a yellow coil wire at the ECU instead. The wire you want for the buzzer can be found at the keyless entry unit, or maybe the integrated module I cant remember. I remember finding the wire before but it was a couple years back so I dont remember the color. You will have to meter it. It will pulse ground when you hit lock on the factory remote. Since you put the unit in automatic mode, I hope the system is tied into the neutral sensing wire so the car wont remote start in gear. If you havent done this yet, I can explain how it is done, just let me know. TriStateI have been using a yellow coil wire at the ECU instead. If you havent done this yet, I can explain how it is done, just let me know. If you havent figured it out by then, I will let you know. If you have, post the info here to help others. You didnt answer my question about tying into the neutral sensing wire. I hope you arent relying on yourself to remember to always leave the car in neutral. Perform a test.park in an open area, put the car in first gear.

Remote start the car and let me know what happens. Not imagine you are parked in front of a house, or facing another car. How much damage would you have caused. Making the remote start work safely in automatic mode in a Subaru is easy. TriStateLike a bad habit i alway wobble the shifter before i step out to make sure is in neutral.Hate my Teins. That is why we have Honda Pressure Washers, because of its quality and durability therefore we proud to feature a complete section dedicated entirely to Honda powered pressure washing equipment. Canadian customers This remote will NOT work if you originally had a 2w8000rf remote or the have the 433mhz antenna.Find the user manual you need for your automobile and more at ManualsOnline Page 3 of CompuSTAR Remote Starter CM4200DX User Guide ManualsOnline.com.
